$\frac{1}{2}$

## Notice de montage

1. Après impression sur du papier cartonné (160g ou 190g), plastifier toutes les feuilles.
2. Découper tous les disques sur leur circonférence.
3. Découper les disques de couleur en suivant les rayons.
4. Positionner ensuite les portions sur chaque disque blanc en les maintenant avec de la pâte à fixer repositionnable.

Les superpositions entre différentes portions de couleurs différentes permettent ensuite aux enfants de mieux percevoir les équivalences entre différentes fractions.
